Abstract

Liver transplantation can save the lives of children with devastating diseases but challenges remain, and varying outcomes can affect patients' lives Standardization and transparency are difficult to achieve, and new developments are implemented slowly Optimizing treatment strategies for pediatric transplant goes beyond traditional research - it requires collaboration between clinicians and families and the utilization of improvement strategies This need is addressed by the Starzl Network for Excellence in Pediatric Transplantation, or SNEPT We are a learning health network aligning clinical care specialists, technology experts, patients, families, and patient advocates The inaugural SNEPT meeting in 2018 brought together key stakeholders in the pediatric liver transplant community to identify key challenges and set goals for improving pediatric transplantation outcomes SNEPT leadership consists of transplant professionals and parent leaders from the SNEPT Patient & Family Voice group Learn more about the Starzl Network and our 2nd Annual Meeting at StarzlTransplantNetwork.com Follow the Starzl Network on Twitter @StarzlT and Instagram @StarzlNetwork Squires et al.
